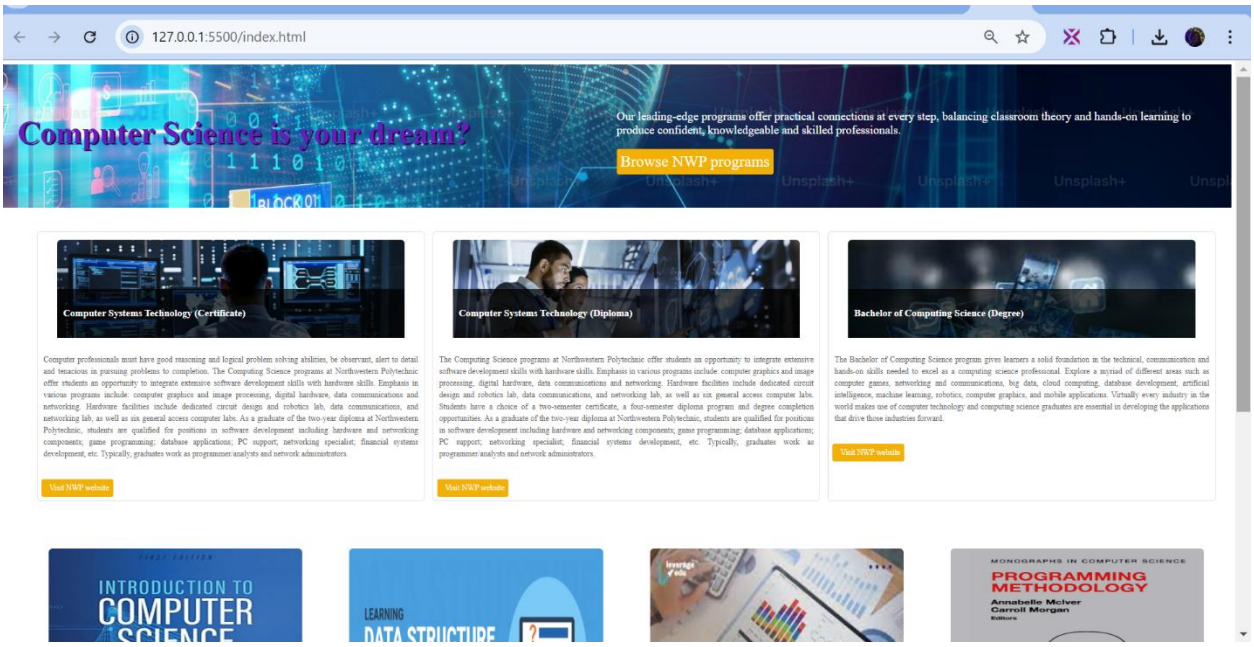
CS3990. Assignment 5 (20 points)

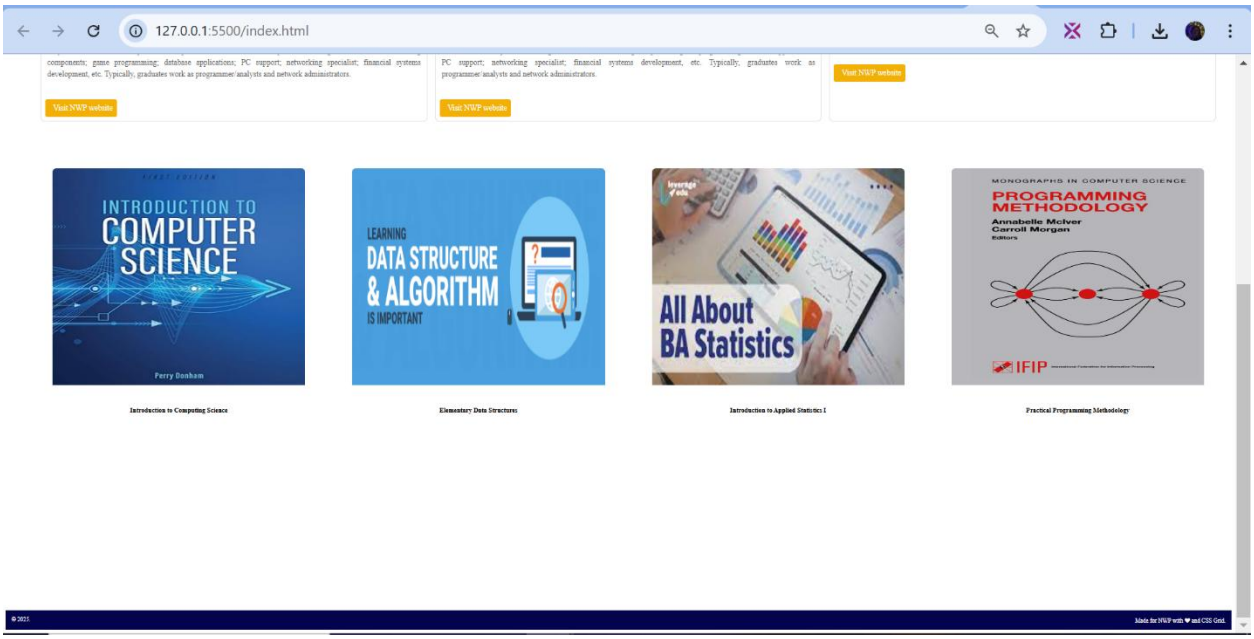
CSS advanced. Responsive Layouts Using CSS Grid

Develop a Responsive Layout for the landing page for CS NWP programs without Media Queries and **by using CSS Grid**.

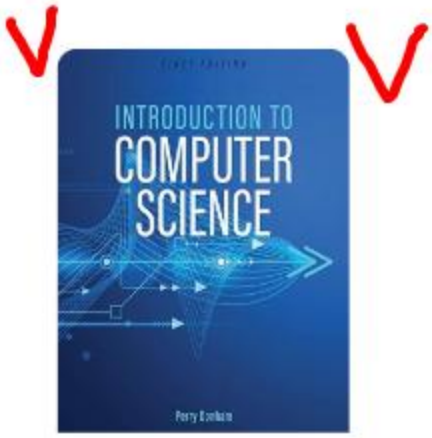
The template includes a full-width top section with a collection of cards (for each program) below.

There is also a responsive image gallery underneath.





Images of the programs card as well as images of courses have a top-left and a top-right corners rounded (see examples below)



Introduction to Computing Science

All elements will respond to window resizing and adapt accordingly (see examples below).

Computer Systems Technology (Certificate)

Computer professionals must have good reasoning and logical problem solving abilities, be observant, alert to detail and tenacious in pursuing problems to completion. The Computing Science programs at Northwestern Polytechnic offer students an opportunity to integrate extensive software development skills with hardware skills. Emphasis in various programs include: computer graphics and image processing, digital hardware, data communications and networking. Hardware facilities include dedicated circuit design and robotics lab, data communications, and networking lab, as well as six general access computer labs. As a graduate of the two-year diploma at Northwestern Polytechnic, students are qualified for positions in software development including hardware and networking components; game programming; database applications; PC support; networking specialist; financial systems development, etc. Typically, graduates work as programmer/analysts and network administrators.

Computer Systems Technology (Diploma)

The Computing Science programs at Northwestern Polytechnic offer students an opportunity to integrate extensive software development skills with hardware skills. Emphasis in various programs include: computer graphics and image processing, digital hardware, data communications and networking. Hardware facilities include dedicated circuit design and robotics lab, data communications, and networking lab, as well as six general access computer labs. Students have a choice of a two-semester certificate, a four-semester diploma program and degree completion opportunities. As a graduate of the two-year diploma at Northwestern Polytechnic, students are qualified for positions in software development including hardware and networking components; game programming; database applications; PC support; networking specialist; financial systems development, etc. Typically, graduates work as programmer/analysts and network administrators.

Bachelor of Computing Science (Degree)

The Bachelor of Computing Science program gives learners a solid foundation in the technical, communication and hands-on skills needed to excel as a computing science professional. Explore a myriad of different areas such as computer games, networking and communications, big data, cloud computing, database development, artificial intelligence, machine learning, robotics, computer graphics, and mobile applications. Virtually every industry in the world makes use of computer technology and computing science graduates are essential in developing the applications that drive those industries forward.

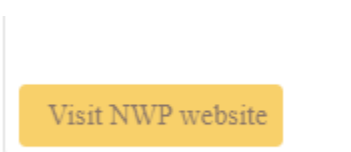
Note! Without writing @media rules.

When you mouse over a link (Browse NWP programs, Visit NWP website) its background and color of text change:



When you click on “Browse NWP programs” you will be taken on the 1st card.

When you mouse over a course's image it will scale up by 1.2 (see example below).

And the information about credits and total hours will be displayed below the course title.

before	after
 Introduction to Computing Science Elementary Data Structures	 Introduction to Computing Science Credits - 3 Total Hours - 90 Elementary Data Structures

Note!!!

A video file with a demonstration is attached to this Assignment
